**Subject:** Microsoft Settlement

The current proposed settlement through it's narrow definitions and its inability to quickly act allows Microsoft to simply side-step the injunctions against it and, by changing very little and relabeling its practices, allows Microsoft to continue anti-competitive practices as well as punish consumers and further business developments in increased costs and tighter licensing requirements.

Please ammend the settlement to truly open the standards so that America can truly benefit from fair competition and fair business practices.

Thank You.
